

Artevia®

THE ART OF CONCRETE

Add strength and beauty to both vertical and horizontal construction projects with ARTEVIA Admixtures. The reliable, nonfading and consistent coloring admixtures for cast-in-place and precast concrete have been proven to stand the test of time.

Beauty, Durability and Value

ARTEVIA Admixtures provide streak-free color-conditioning and performance characteristics superior to concrete colored with raw pigments. More than 550 color formulations are readily available, in addition to our custom color-matching service.

LITHOCHROME® Colorwax™ and **COLORCURE® Concrete Sealer** are available in matching colors.

Review Tech-Data Bulletins and MSDS before use.

* Shadow Slate is only available in powder form.

Colors shown approximate the color of broom-finished concrete flatwork made with a medium-gray cement.

Concrete should be batched and placed in accordance with Tech-Data Bulletins.

Concrete color is altered by many factors, including cement and aggregate color, slump, finishing practices, and curing method. Using the contemplated materials and construction techniques, representative samples should be cast for approval, especially when exact color matching is important.
